Top Projects

ANDROID APPS

- **GoDropping Ghana:** an app for online transportation, With shared pool riding and one to one riding and online payment for rides. Designed screens for user app and worked with logic implementation in both user

- **Rehmie:** An online shopping application and also you can recharge and pay your bills online. An app in which you can order goods online, and track it with location and payment can be made online as well as COD. In this app, I designed all screens and implemented business logic single handedly.

- **SocialRide:** crowdfunding platform for medical, social and personal causes. Responsible for design and complete development of the app

Responsibilities

- Responsible for debugging, error fixing in application on real time users.
- Worked android libraries such as ButterKnife, Picasso, Gson.
- Integrated App with server using OkHttp, and used JSON for server communication
- Contributed in developing some features of game in libGDX framework and with Android Studio
- Implementation of UI changes as per guidance of designing team and app monetization technique by placing ads and in app purchases.
- Individually designed, developed and tested a pack of seven apps with business logic are now live in "playstore".
